

How much do the valid inequalities strengthen the LP bound?

$100 \times (\text{LP}(3_VI) - \text{LP}(3)) / |\text{LP}(3)|$ · Higher values mean a stronger lower bound

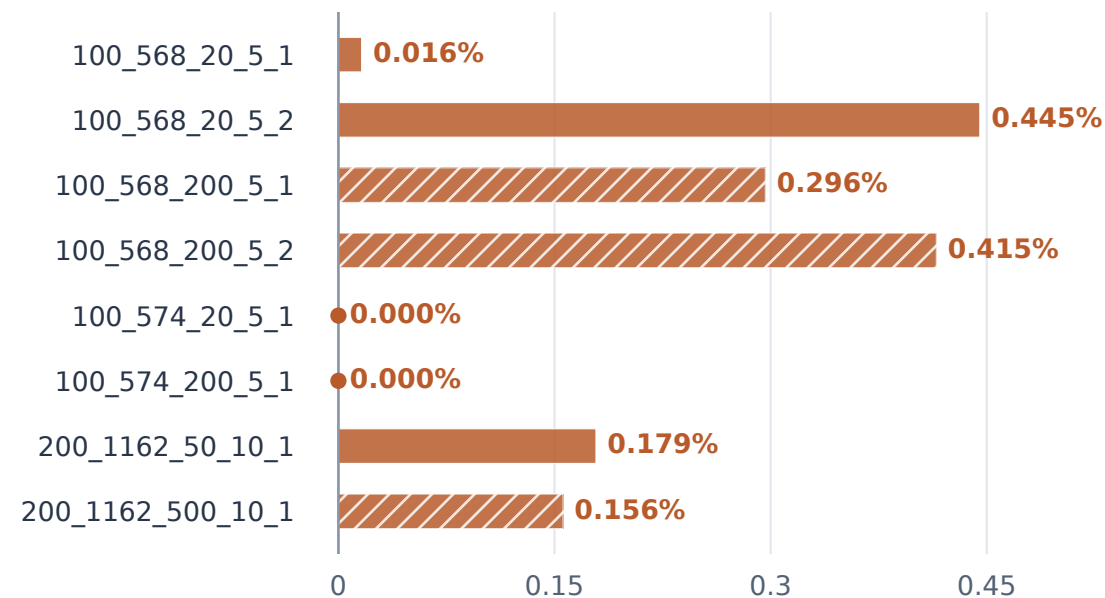

_c instances | 8 matched LP pairs

Relative increase in LP objective (%)

VI cut cap: 100. Hatching: separation stopped with remaining violated inequalities.

_dir instances | 8 matched LP pairs

Relative increase in LP objective (%)
